

**INSTALLATION:**  
Muratori Machines:  
RANGER CNC

**COMPANY NAME:** Fab24

**LOCATION:** Glasgow, Scotland

**CUSTOMER NAME:** Ryan McConnell

**POSITION:** Managing Director

The Muratori Ranger has significantly enhanced our production capabilities, allowing us to deliver high-quality products with greater speed and precision. We're confident that Muratori will remain an integral part of our operations.

**Ryan McConnell, Managing Director, Fab24**

## Automation, Precision, Reliability: the CNC Ranger at the heart of Fab24's production

Fab24 is a leading manufacturer in Gauge metal technologies, formed in 1992. They specialise in the supply of a wide range of architectural fabrications and façade solutions and they are able to supply fabrications to clients throughout the whole of the UK. They pride themselves on product quality, service, reliability and customer satisfaction and they do this through continual investment in the latest CNC machinery and technology innovations. This allows Fab 24 to remain at the forefront of metal and board fabrication.

The company fabricates products for projects in the construction industry using ferrous, nonferrous and composite materials. They have an automated solution that enables great precision and speed in the machining of composite, solid aluminium and fibre cement panels, while safeguarding the panels thanks to the vertical positioning of the table.

In 2012, Fab24 made a strategic decision to invest in automation, opting for Muratori's 5-metre Ranger CNC. This machine was the first of its kind in the UK, offering unparalleled precision and speed for the fabrication of various materials. Designed with high-speed aluminium cutting in mind, the Ranger CNC allowed Fab24 to handle complex projects more efficiently.

Muratori Machines Ranger CNC led to significant improvements in Fab24's production flow. The machine speed, precision, and vertical positioning enhanced the company's ability to produce fabricated items quickly and competitively. The result was an accelerated workflow, allowing Fab24 to meet tight deadlines while maintaining the high standards for which the company is known.

Fab24 has also experienced excellent support from PCS Ltd and Muratori Machines, with quick responses to any production issues. The Ranger

CNC has not required any special modification, but it was built to Fab24's specifications, including a V-Groove saw and aggregates for high-speed aluminum cutting. The company is confident that the Ranger will continue to play a key role in its production process, and they are likely to invest in a new model of Ranger CNC in the coming years.

PCS LTD. UK AND IRELAND are exclusive UK suppliers of CNC Panel Routers from MURATORI MACHINES

Benefit from our UK based Applications and Service engineer, 100% dedicated to our network of machines in the UK, ensuring priority software and project support, and unrivalled service.
