Statement letter

Herewith the company COIL N.V./S.A., Industriezone 5, 3400 Landen, confirms that

- The anodic layer is atomically bound to the substrate and acts as flexible layer. The aluminium oxide layer is built (grown) from the surface in an artificial way, just like it would be in nature, so the product is a pure 100% aluminium product.

- Anodized aluminium is graffiti proof
 - Graffiti can easily be removed from anodized aluminium by means of a neutral soft cleaning agent (pH between 5 and 8) and a soft and absorbing rag.
